

COLOR ME RADIANT · SESSION 1

Online Colour Analysis: Photo Guide

Ragini Tripathi · Image consultant · Color Me Style

Your colour analysis is only as accurate as your photos. These steps take about 15 minutes and make sure the colours you see in your results are the colours that truly suit you.

1 What to wear

- ✓ A plain, pure-white T-shirt (not off-white, cream or bluish white). White is the neutral reference for your skin.
- ✓ No makeup at all: no foundation, concealer, blush, kajal, mascara, brow product, lipstick or lip balm.
- ✓ Wash your face and pat it dry. Skip moisturiser and tinted skincare just before, so there is no shine or tint.
- ✓ Remove earrings, necklaces, glasses and scarves. Coloured contact lenses out, please.

2 Light and background

- ✓ Natural daylight, facing a window, ideally between 10 am and 3 pm. A bright cloudy day is perfect.
- ✓ No direct harsh sun, and no yellow or white tube lights mixed in (switch indoor lights off).
- ✓ A white or plain light wall behind you, with a little distance so no colour reflects onto your face.
- ✓ Nothing brightly coloured near you (curtains, walls, clothes on a chair): colour bounces onto skin.

3 Camera settings

- ✓ Use the back camera and ask someone to help, or use a stand.
- ✓ Turn OFF filters, beauty mode, portrait mode, HDR, night mode and any AI or "photographic style" enhancement.
- ✓ Hold the phone at eye level. Neutral face: no smile, no frown.
- ✓ Do not edit, crop or brighten the photos afterwards.

4 Hair

- ✓ Tie your hair back for most photos so your full face, jawline and neck are visible.
- ✓ Take a few with hair open too: your hair colour is part of your analysis.
- ✓ Take a close-up of your hair in daylight from the top and side. If your hair is coloured, include the natural roots.

The photos I need

1. Front close-up, hair tied back
2. Side close-up, hair tied back
3. Front photo with hair open
4. Side photo with hair open
5. Extreme close-up of your eyes (sharp, in focus)
6. Your natural hair in daylight, top and side
7. Mid-shot of face and shoulders in the white T-shirt, hair tied
8. Bonus: the same front close-up under white indoor light

How to send them

- ✓ On WhatsApp, send the photos as a Document (tap the paperclip → Document), not as Photos. Normal WhatsApp photos are compressed and the colours shift.
- ✓ Or email them, or share a Google Drive folder.
- ✓ Please send them at least 2 days before your colour analysis session.
- ✓ Take several of each and send the clearest ones. Blurry photos cannot be analysed.

"Be honest with yourself and the colours will be honest to you."

Your photos are strictly confidential. They are used only for your analysis and are never shared on any platform without your written permission.
